

# What's Ahead for 2026: Polarization

December 30, 2025

[2026: What's Ahead](#), [5G](#), [Accountability](#), [British Israelism](#), [Censorship](#), [Climate change](#), [Communism](#), [Covid](#), [Freedom](#), [Gaslighting](#), [Gay](#), [Government](#), [Government tyranny](#), [Homosexuality](#), [Insanity](#), [Politics](#), [Psychology](#), [Racist](#), [Science](#), [Snarkcastic](#), [The Year Ahead](#), [Trends](#), [Trump](#)

Pregnant gay man with partner

**No! Just no!**

**Men can't become pregnant!**

And yet:

**In 2023, a UK poll found about 30% of people thought it was possible for a man to get pregnant, while 50% said no, and 20% were unsure, but definitions (cis/trans) varied.**

From [KFAX](#):

Nearly one in four Democrats and more than one-third of white, college-educated female Democrats believe “men can get pregnant,” according to a new survey.

The [poll](#) by WPA Intelligence found that 22 percent of Democrats and 36 percent of white, college-educated Democratic women agree with the statement that “some men can get pregnant.” That view was shared by 27 percent of self-described liberals and 29 percent of white Democratic voters.

“Overall, few Americans think men can get pregnant,” said Conor Maguire, managing director of WPA Intelligence, according to the Daily Caller. “But with 36% of a core Democratic constituency (college-educated white Democratic women) and one out of five Democrat voters believing this, one can see why Democratic leaders coddle the radical gender theory movement.”

For those who believe men can get pregnant, it's hard wired — there is absolutely no way to convince them otherwise. It's like trying to convince an Armstrongist that British Israelism is nonsense. Persuasion just isn't possible.

So, on this one item alone, there is a very strong polarization of two camps: One side claiming it's true and the other side saying it's insane. Science and biology don't matter.

Dr. Johnson Varkey. wrongfully fired him for teaching biology.

In 2023, Black adjunct professor **Dr. Johnson Varkey** at Texas's St. Philip's College (a community college) was terminated for stating sex is binary, a case also involving conservative backlash.

**Details of the St. Philip's College Case (Varkey):**

- The Incident: Dr. Varkey, an adjunct professor, told students that sex is determined by chromosomes (X and Y).
- The Firing: He was fired in 2023 after students complained, despite having positive reviews and teaching standard biology.

The case highlights ongoing tensions between academic freedom, curriculum, and conservative viewpoints on gender and sex in educational settings, with a Black professor fired for binary sex views, sparking significant debate.

Debate?! Debate?! There is no debate. It's science. It's biology. And yet... opinion triumphs over indisputable objective facts in a significant way. Teach biology for 20 years and then... just fired — for offending the sensibilities of leftist students. No one in the administration seemed concerned with objective facts.

### [And the less said about Thomas Beatie the better.](#)

Zohran Kwame Mamdani

Of course, this is just one small detail among thousands of others that polarize people in today's society. Consider the election of Zohran Kwame Mamdani to become New York City's new mayor.

He is a Muslim and a socialist.

65% of Gen Z want socialism. So much for it being the most conservative generation in decades.

The thing about socialism is that it has never worked. It has always failed and brought injustice, poverty, homelessness and other unfortunate consequences. The best of the worst example of this is the now failed Soviet Union.

Here's the thing about socialism [/ communism]: Socialists sort of know that socialism simply can't work until everyone — absolutely everyone — is under it, because... socialism is assumed to work when resources are infinite! When we have free access to everything without limit, socialism will work. All that remains is the distribution strategy!

Of course, this does NOT take entropy into account. Also, it does not take into account that there is no such thing as infinite resources. It conveniently ignores that a lot work and energy is needed to produce

goods and services.

So... socialism looks really great, right up to implementation. Zohran Mamdani is looking to make public transportation free in New York. There are some questions. How will all that be paid for? It just seems that socialism is like giving a patient a blood transfusion from one arm to another.

And yet... and yet... that segment of the populace that are for socialism are quite vociferous about implementing it. In fact, they are so strident, that they are not above assassinating people they perceive to oppose them.

Charlie Kirk, for example.

Not only was Charlie Kirk assassinated in public on stage, in the aftermath, leftists around the world were cheering!

It's now sport to commit assassinations if someone's belief system doesn't match yours. There's no discussion. No debate. Just... death. It's seen as the only solution to dissolve disputes.

Charlie Kirk: Turning Point USA

It also makes martyrs.

There are so many things you can't mention even today without creating a storm of controversy: Global warming (if you must, climate change), COVID (related anything including the clot shot), Zelenskyy, Ukraine, Putin, abortions, border security, gun control

laws, debates regarding LGBTQ+ rights, book bans in education, immigration, gun control, social media's role, economic inequality, healthcare access, racial justice (police reform, reparations), early voting, voter ID laws, Gerrymandering, digital privacy, genetic engineering, cybersecurity, vaccinations, euthanasia, legalization of marijuana, addiction treatment vs. punishment, fossil fuels, renewable energy, Green New Deal, animal rights, nuclear energy, fracking, critical race theory, gender identity, student loan debt, land acknowledgement, sex education, grooming, 5G, arms control, antisemitism, misinformation, mental health, socialism, inflation and cultural issues like free speech vs. censorship and rising crime rates. It's always meltdown. Divide and conquer. Oops! Forgot **RACIST!**

That's the thing about polarization: It doesn't have to make sense. The opinion of the insane is pushed on all of us with power. If you are on the wrong side of opinion, you're wrong. Facts be damned. Opinions are the most important thing there is. Expressing facts and science are hate crimes. It's not coming. It's here now. It's a trend. It's not going to go away. It has implications for 2026 and beyond. It's a fight to the death — quite literally.

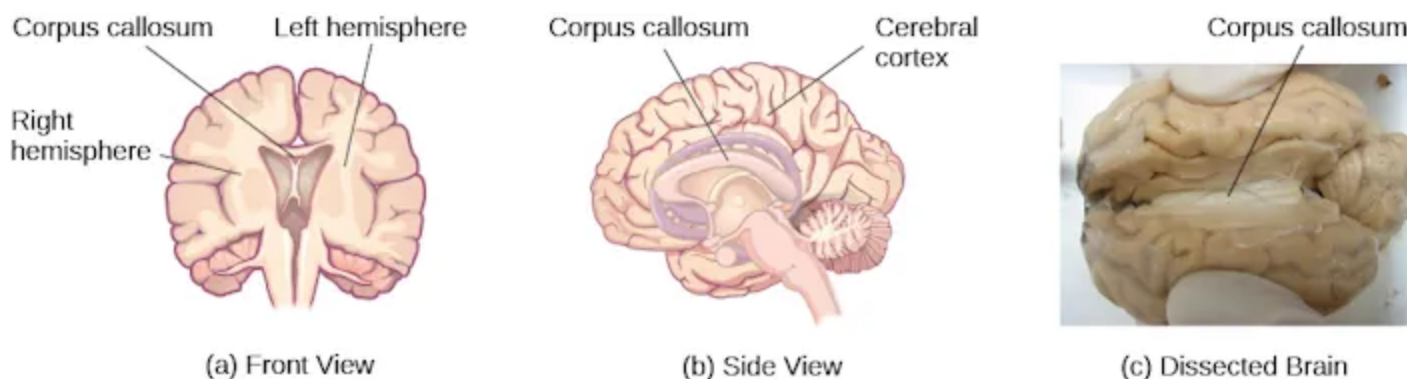

Confidence is equated with competence. It isn't.

## Attack on Agency

In the development of the homo sapiens male, there are several important milestones:

- Development of basic morality and ethics at the age of 5, which become stable for the rest of life
- Establishment of certain social interactions at age 9
- Beginning of adolescence beginning around age 13
- Final growth spurt of the amygdala, ages 17 through 25
- Establishment of life mission and stabilization by age 30

For the homo sapiens male, adolescence is the time that there is a revolution of the body. Testosterone promotes lung, bone and muscle superiority over females of the same age. It is a time for major changes wherein there is more strength and energy which leads to experimental behavior and longer days. During this time, there is a paring in the brain to excise brain cells and neurons for the specialization which is ahead. Males are 'streamlined' for action.

Corpus Callosum across the two hemispheres of the brain

At the same time females develop more connections across the corpus colosum: Communication between the brain's left and right hemispheres happens primarily through the **corpus callosum**, a massive bundle of nerve fibers, allowing them to share information for coordinated functions like thinking, movement, and language, essentially enabling the brain to work as one unified, efficient organ, though each side has specialized roles (e.g., left for logic/language, right for spatial awareness/emotion).

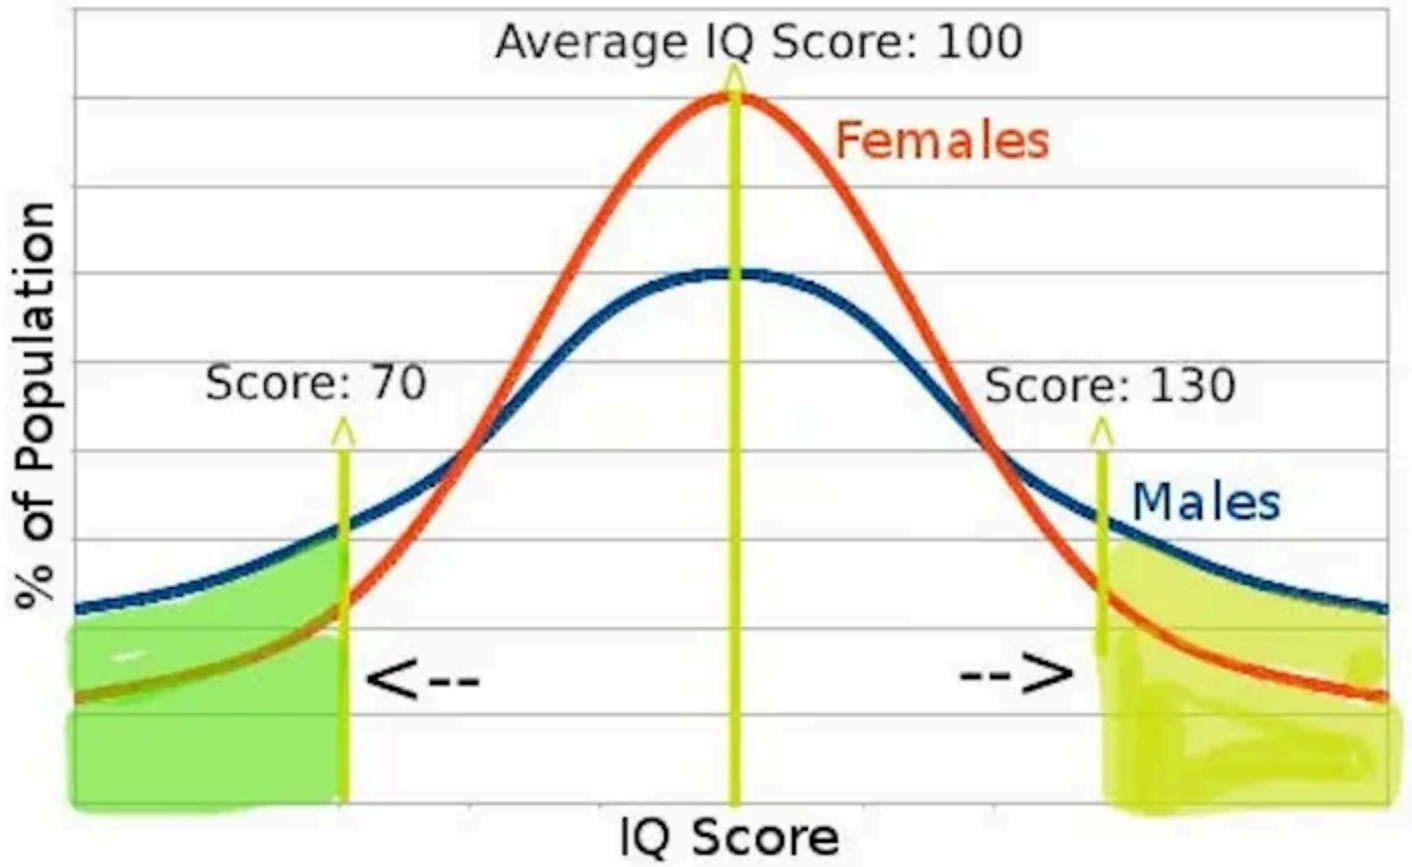

## How They Connect

- **Corpus Callosum:** The main bridge, containing millions of nerve fibers (axons) that rapidly transmit signals between hemispheres, crucial for integrating tasks.
- **Other Commissures:** Smaller fiber bundles, like the anterior commissure, also facilitate cross-hemispheric communication.

## Why It's Important

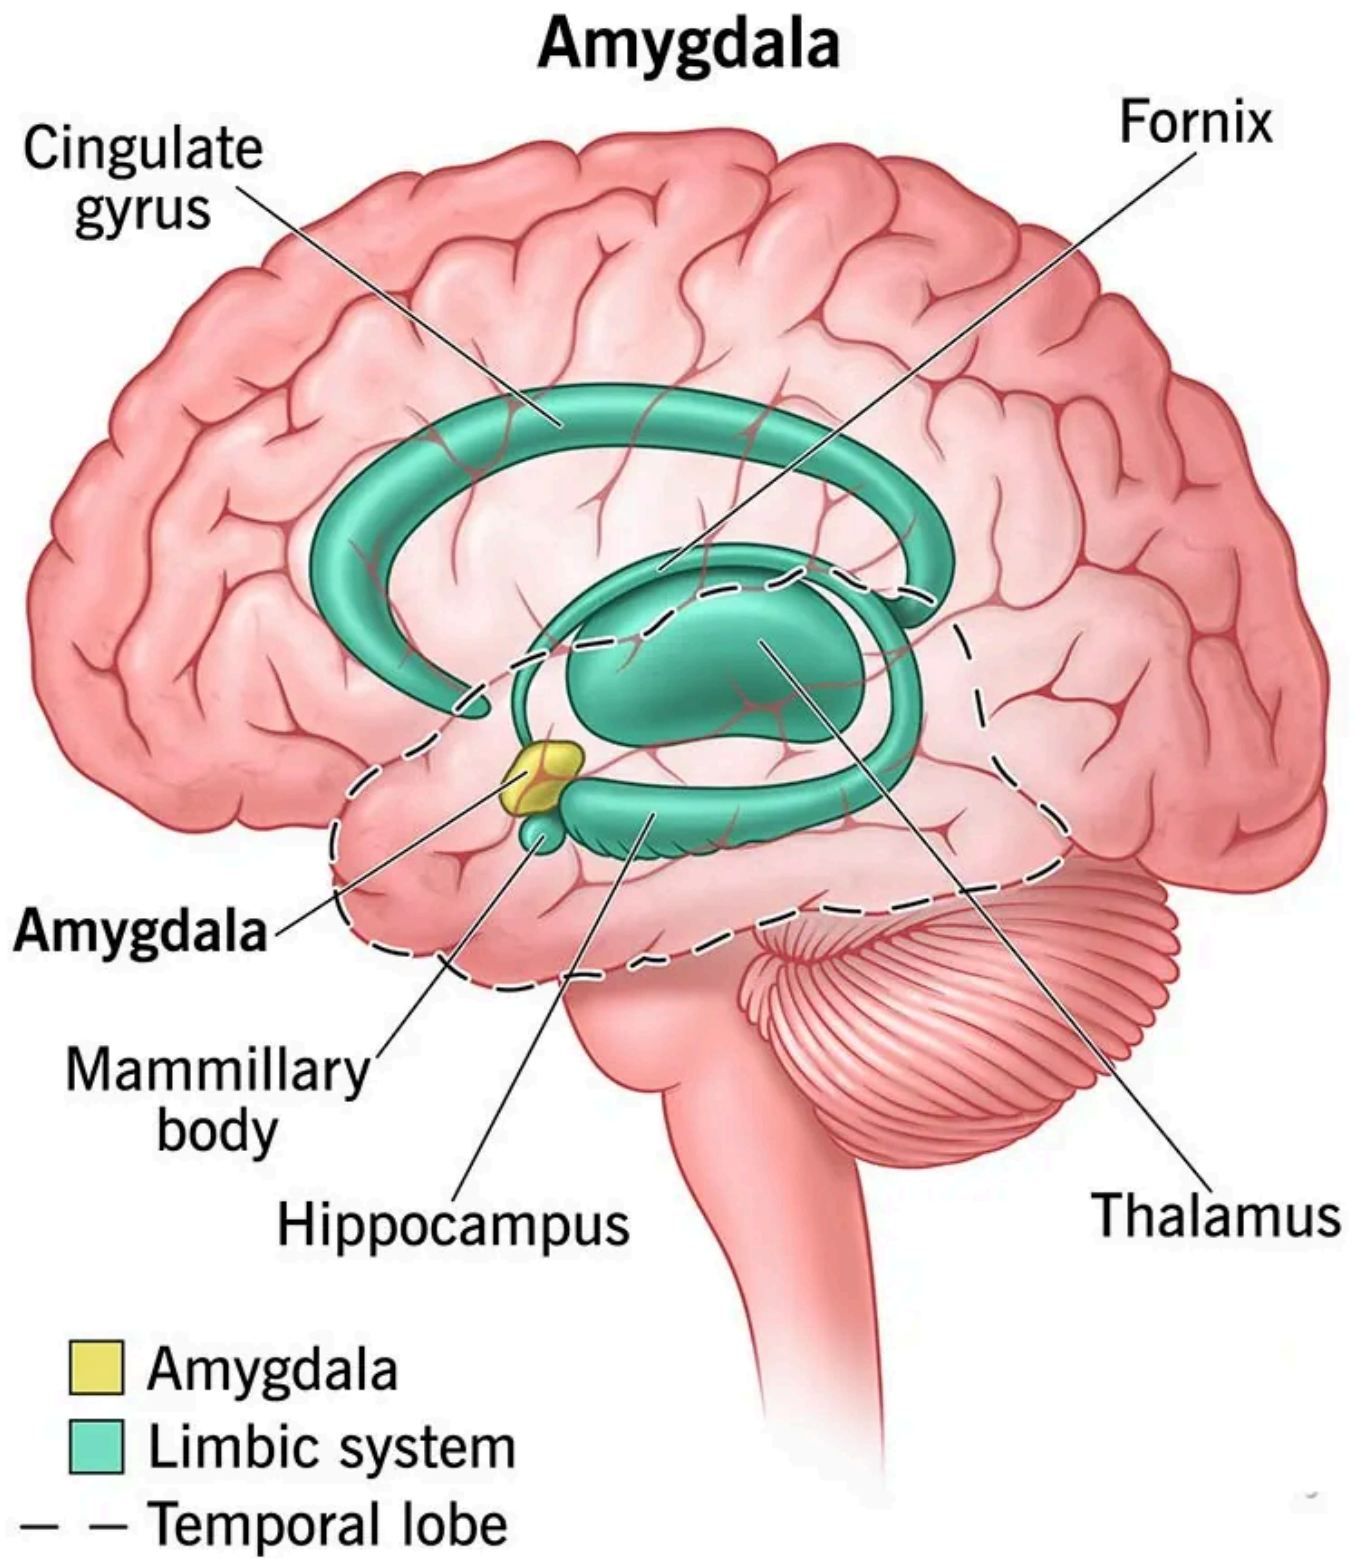

- **Unified Function:** Allows both sides to work together, preventing them from acting independently, as seen in “split-brain” patients with severed connections.
- **Specialized Tasks:** While connected, hemispheres specialize (lateralization); the left often handles language/details, while the right manages spatial/holistic processing, but they must communicate to integrate these functions.
- **Cognitive Benefits:** Good communication supports creativity, attention, problem-solving, and overall mental processing.

This becomes a basis of the differences between men and women. At Thanksgiving, the women can carry on multiple simultaneous conversations actively at the same time and the men wandering in listening to it says, “Huh?”. It’s not necessarily an advantage. The emotional / creative part of the brain can distract from making choices and important decisions in women, where in men, decisions can be more definite and focused. It should also be noted that in terms of I.Q., men are both smarter and dumber than women — the I.Q.s of women tend to cluster within the bell shaped curve of the standard distribution of the binomial theorem.

Men are both smarter and dumber than women

# Amygdala

The amygdala is the center of the will and agency

The amygdala is the part of the brain that enables humans to make decisions, but it is much more than that. It is also a part of identity and self recognition.

The amygdala is present but not well developed in boys. From 17 to 25 years old, there is a growth spurt, during which the amygdala is fully developed. Before this happens, boys may lack a focus of purpose. There may be confusion about decisions. It is a time when they may be more easily influenced. By the age of 25, boys go from proto men to full manhood. If anything goes right, they should have a good idea who they are and what they will and will not tolerate. They have agency. Note that though a man may seem to be the same person at 25 than they were at 17, they are in fact very different.

It should also be noted that the amygdala is implicated in the 'inner voice', particularly associated with addiction which often needs to be managed with rational recovery.

Agency is important. Agency means that a person is in control of making decisions and living with the consequences. In the best of worlds, a man can collect and consider the ideas, talents and experiences of others, weigh them and make the decision that best fit what they want to do. Men are both cooperative and independent. Intelligent collaboration and consensus can lead to impressive results. Men build families, cities, counties, provinces, states, regions and countries. Men invent. Men maintain. Each man can focus on his own particular abilities, strengths and experiences to solve and resolve problems in amazing ways.

Consider the monument of civilization developed in Switzerland:

## How Switzerland Engineered the Perfect Country

<https://youtube.com/watch?v=OMbV1rIPhCg>

This is what people can do, even if, and especially if, they are fiercely independent. Note that Switzerland has one of the most successful and longest democracies in the world.

But selfish people would like to take away agency. They want control. The billionaire oligarchs of the world would like to dominate and control people to take away their agency. They want agency gone to expand their ideas and ideologies. They'd like to take freedom away because it endangers their own elite status. Men can't be men. They must be destroyed. Agency must be thwarted. This is true of cult leaders and despots of every stripe. Dominant 'leaders' are often confident, controlling, and hierarchical, driving results through, decisive, and sometimes intimidating, actions. They are frequently seen in politics and business as competent, and action-oriented, especially in uncertain times.

Just how do despots rob people of agency?

Despots can weaken the amygdala in various ways, including, but not restricted to pollutants, starvation, slavery, propaganda, impoverishment. The current currency despots have is polarization: They line up two sides to oppose each other, fostering chaos. The confusion and doubt that is created makes an opportunity to implement programs which would otherwise be rejected. The most effective of these is creating an insane sound bite that makes people doubt themselves, such as... wait for it... men can get pregnant.

Dominance in the form of restrictions and taxes are always a go to for the villain. Consider that for the most part, none of us can actually own property — except for about 5 small countries that don't have property tax. We pay rent. We don't own. If we don't pay, access to the property just goes away.

Eminent domain is the government's power to seize private property for public use, even without the owner's consent, provided "just compensation" (fair market value + damages) is paid [good luck with that]. This power supports projects like roads, schools, or utilities, but also applies to economic development, requiring fair process, including appraisals and offers, though owners can challenge the taking's validity or compensation amount. This is nonsense of course, seeing how property has been seized by the government and given to a developer to develop a strip mall that promptly goes bankrupt. Things can go terribly wrong and here's a sideways example:

[Cle Elum files for bankruptcy over \\$26M debt to developer over delayed housing project.](https://www.youtube.com/watch?v=dQMZR64G_eM)

There are solutions to this sort of problem. Observe Italy's radical solution to extreme inequality:

### Italy's Radical Solution to Extreme Inequality

[https://youtube.com/watch?v=dQMZR64G\\_eM](https://youtube.com/watch?v=dQMZR64G_eM)

## Inherited Aptitudes

Which side you'll come down on in the polarization between sanity and insanity depends quite a lot on what aptitudes you've inherited. Certain aptitudes will shape your thinking to a very great degree. Here's a short video introduction to the Johnson O'Connor Research Foundation about this topic:

## Testing with the Johnson O'Connor Research Foundation

[https://youtube.com/watch?v=JWkA\\_fe2mxc](https://youtube.com/watch?v=JWkA_fe2mxc)

Please read the attached PDF, [Choosing Intelligently, A Practical Guide to Using Your Aptitudes](#):

# Choosing Intelligently

A Practical Guide  
To Using Your Aptitudes

Note the article, "Structural Visualization" on page 11. Structural Visualization is a sex linked inherited talent, passed from the mother to the children. Only around 25% of the population has Structural Visualization to any degree. The aptitude very clearly characterizes fields associated with 3D thinking like mechanical engineering, architecture, sciences, most medical specialties, auto mechanics, most computer related careers, most farming, ranching and carpentry. Those without a need for it include careers in economics, writing, law, sales, advertising, insurance, psychology, most nursing, clerical / office work, television, media, movies, singing, most music, sports, accounting and... politics.

This sets up a clear but invisible divide. There are those who simply cannot understand the physical universe around them. They cannot understand how things work. They are vulnerable to the expertise by those who do have Structural Visualization. Those without have to depend upon those who do for a lot of basic things in life.

Enter politics.

Some pundit comes up with a crazy idea like men can get pregnant. Many of those with structural visualization are probably call "bull" on it and want to move on. It's fantasy, not reality. But to the lesbian barbers, it can be a reality that cannot be dismissed. To them it sounds and 'feels' right. In fact, they may know someone who knows someone who knows a man who actually gave birth.

The gold standard for these sorts of people is the belief that no matter how absurd something is, they think that if enough people believe in something it can and probably is true. Nothing will dissuade them: It is democratized if the majority believes it. They are instant enemies to those who disagree. This is particularly true about socialism: It must work. It has to work. It never has, but the belief keeps it alive.

Unfortunately, when in positions of power and influence, these people can make the lives of those who oppose them miserable with unending opposition and there is nothing, but nothing that will ever convince them of the truth.

That's 75% of the people.

That should frighten you.

Some may wonder what happens when a man with structural visualization marries a woman who does not have it?

The answer should be obvious.

The woman will never really understand the man. There are totally different perspectives, goals and focus. The woman sees absolutely no reason why the man would want to tinker with classic cars or build things. To her, there are more important things, like serve her and fixing everything she breaks. She may even tell him, "You need to take care of me!" Indeed it is true, but there may not be much reward for it. She sees the obvious outward things without having any concept of what's within — the triumph of image over substance. There will be constant tension and not the good kind. They will agree on nothing. It's worse if she has borderline personality disorder. There's nothing like feeling like you're walking on eggshells — constantly accused and subject to backstabbing.

And then the children come along.

The children will NOT inherit structural visualization. They will side with their mother. They will not really understand dad. For most women, this means control. Dad will become a stepfather in his own

home. It will go on for decades and no one will know what went wrong. Not only that, the problems are often not visible to the outside world. Everything may seem fine when they definitely are not. And even if outside people see it, 75% will side with the woman and condemn the man for his unreasonable position on things.

No matter. President Trump has structural visualization. Nancy Pelosi does not.

## Rural vs Urban

To the inner city dweller who has never known anything else, a naked roll in the hay sounds like fun. To those who have worked in barns and hay fields know better.

Tim Pool tells of a young man in the city who thought it would be fun and exciting to go work on a farm. He lasted exactly two weeks.

Farmers and ranchers deal in daily reality. Often, you cannot skip a day just because you feel like it. It takes perseverance and discipline — those qualities which are not usually a part of life of the urban citizen. Rural dwellers live close to 'nature', often part of genuine life and death situations [not that citizens of Chicago, for example, don't live with life and death situations — just not at all the same]. Rural people have more of a sense of reality of what is and what can be. They know better, for example, where food comes from.

Tim Pool tells of his conversation with some urban leftists about where milk comes from: "It comes from the store!" "But what if the milk runs out?" Tim asks. "Then they just go to the back of the store to get more!"

And there it is.

Many urban people don't actually know where their food comes from. They think it's just there. They have no idea why it costs what it does. They have no concept of rural production, fuel prices and logistics. Those are abstracts that have no relevance in their day to day thinking. They have no idea of the history of agriculture and how it developed across millennia. It's not real to them.

So when someone gets a grand idea of socialism / communism, it makes perfect sense to them. They don't need to understand the mere mechanics of it all. They don't need to know how it works. If something isn't working, their solution is to enact legislation to make it work, no matter how silly the actual mechanics of it is.

In the United States, the demarcation between rural and urban occurred around 1974. If you look at the trends before and after that point, you can understand the shift between the agricultural basis to the industrial at that time with significant impact as the decades rolled on. This has very great implications going forward.

The polarization keeps growing.

As for farmers and ranchers, if a man can get pregnant, a bull can bear a calf. They'll never buy it.

---

## What we can never tolerate

The following 11 principles are absolutely non-negotiable. As we move forward into the next year, we must set immutable boundaries of which we will not tolerate anyone breaching.

Recognizing these boundaries can be a wake-up call:

- Are you tolerating behaviors that compromise your values?
- Are you giving your energy to people who honor it?
- Are you living in alignment where you are not betraying yourself?

Integrity matters.

Do not tolerate:

## 1. Disrespect in any form

This goes far beyond simple rudeness. Men with integrity won't tolerate belittling, mocking, or dismissing behavior, not out of pride, but because they genuinely value people and the energy each person brings into a space. For them, respect is about the golden rule: treating others as they would want to be treated.

Disrespect isn't just offensive. It diminishes connection, undermines trust, and erodes self-worth. They refuse to sacrifice their own integrity or the integrity of their relationships by tolerating it.

## 2. Lies and deception

Honesty is a cornerstone of integrity, but people with true character understand that life isn't black and white. Small lies meant to protect someone's feelings are sometimes acceptable, but intentional deception at someone else's expense is never tolerated.

They recognize that trust is fragile and repeated dishonesty, manipulation, or hiding the truth erodes the connection. When faced with deliberate deceit, they will address it directly or step away, because maintaining integrity means protecting themselves and their relationships from harm.

## 3. Control, coercion, and manipulation

Control is the opposite of integrity. People with integrity don't dominate, dictate, or force outcomes, and they won't tolerate it from others. True strength comes from self-mastery, not the manipulation of another's free will.

Control can appear as subtle pressure or guilt-tripping that results in chronic negativity that drains energy. People with integrity honor freedom and authenticity—in themselves and others—and build relationships on respect, truth, and emotional safety, not fear or power over others.

## 4. Disloyalty

Loyalty is a reflection of character, but people with integrity don't demand it. They trust those who recognize their values and moral compass will naturally act in alignment. Unlike some leaders who seek loyalty as a measure of admiration or control, people of true integrity don't center their lives on being admired or validated by others.

They won't stick around for betrayal, whether it's a friend talking behind their back, a partner lying about intentions, or colleagues undermining them. They also don't need to ask for loyalty. True loyalty arises naturally from respect, trust, and shared values. Consistency and reliability aren't "nice-to-haves"; they're essential.

## 5. Lack of accountability

People with integrity take their own responsibility seriously. They own their mistakes, learn from them, and make amends when necessary. But this commitment to accountability isn't one-sided. They expect the same level of responsibility from everyone around them.

They won't tolerate blame-shifting, deflecting, or refusing to admit when someone is wrong. For them, accountability is non-negotiable because it is the foundation of trust, respect, and authentic connection. It's not about perfection. It's about the courage to face reality and take ownership of your choices, actions, and decisions, even when mistakes are made.

## 6. Not setting boundaries

Boundaries aren't walls. They're sacred markers of self-respect and a reflection of personal value. Men with integrity set them clearly, whether around time, energy, or emotional availability, and they will not allow anyone to repeatedly cross them.

Healthy boundaries aren't meant to push people away. They protect against being taken advantage of, manipulated, or victimized. By honoring their own limits, they preserve their energy, maintain authentic connections, and reinforce the sense of worth that guides all of their relationships.

## 7. Pretending to be someone they're not

People of integrity notice when someone presents themselves as one thing — kind, humble, spiritual, generous — but consistently acts in ways that contradict that image. They won't tolerate people pretending to be someone they're not, whether it's claiming values they don't honor or projecting an identity for status, money, or approval.

Integrity demands authenticity. Who you are in private must align with who you show up as in the world. True character is measured not by what someone says, but by the consistency between their words, actions, and essence.

## 8. Hypocrisy

"What you do speaks so loudly, I cannot hear what you say." People of integrity live by this principle. They notice when someone claims values — honesty, generosity, humility — but consistently acts in ways that contradict those stated beliefs.

Hypocrisy erodes trust and reveals character, or the lack of it. True integrity demands alignment between belief and behavior. Your principles are only meaningful when your actions consistently reflect them.

## 9. Dishonoring commitments

People with integrity take promises seriously, whether in personal relationships, work, or casual agreements. They won't tolerate people who repeatedly break commitments, cancel without consideration, or fail to follow through on what they've agreed to.

Words only carry weight when backed by action. Failing to honor agreements signals unreliability and a lack of respect for others' time and trust. Integrity means showing up consistently and expecting the same from everyone in their life, because reliability is a reflection of character in action.

## 10. Chronic negativity or toxic energy

People with integrity deeply value empathy. They understand the importance of listening, supporting, and connecting with others' feelings. But they also recognize that empathy is not the same as accepting constant blaming, complaining, or toxic energy.

They protect their emotional and mental space by setting boundaries around prolonged negativity, understanding that exposure to it can be harmful to their well-being. Maintaining emotional health allows them to stay grounded, present, and capable of giving authentic support without being drained or victimized.

## 11. Entitlement

Entitlement is the belief that one inherently deserves special treatment, privileges, or consideration, regardless of effort, fairness, or the needs of others. People with integrity recognize this as a narcissistic and selfish quality because it can step on the feelings, needs, and boundaries of those around them. They won't tolerate people who act as if the world exists to serve them, who take without thought, or who assume their desires automatically outweigh everyone else's.

True integrity flows from respect, and an awareness of shared humanity. Men who live with integrity move through life grounded in balance, conscious of their own values, and aligned with the greater good. They are never subordinating others to their ego or sense of entitlement.

---

Stop tolerating polarization. Be done with the gaslighting. Oppose the lies. Stand up for agency.

## Do Truth Seekers Retire?

When a man sets his life's mission to be a truth seeker and help people with that knowledge, does he ever retire?

You can sort out the answer for yourself:

## The Future of Veritasium

<https://youtube.com/watch?v=piHGnG4LsmQ>
